SUMMARY

Software Engineering graduate from FAST NUCES Islamabad with hands-on experience across web, mobile, desktop, and AI-powered development. Proficient in software quality assurance and testing, with practical experience using Jira for issue tracking and test management. Experienced in workflow automation using tools like Zapier to streamline processes and reduce manual overhead. Passionate about building reliable, well-tested software and eager to contribute across the full development lifecycle.

TECHNICAL SKILLS

Programming Languages: C++, C#, Python, Dart, Java, JavaScript

Frameworks & Libraries: Flutter, React, SpringBoot, WinForms/.NET, OpenCV, PyTorch, LaTeX

Databases: MySQL, SQL, SSMS, MongoDB, PostgreSQL, Supabase

Tools & Platforms: Docker, Git, GitHub, Jira, Zapier, Swagger, Wireshark, Figma

PROJECTS

Wearism | *React Native, Python, AI/ML*

AI-Powered Fashion Assistant

- Built an AI-powered fashion assistant mobile app using a modular client-server architecture
- Developed AI-based outfit analysis pipelines with features including outfit rating and digital wardrobe management
- Implemented social networking, a vendor marketplace, and analytics and recommendation systems

Forge | *Python, FastAPI, Supabase*

Fitness App Backend

- Built a RESTful backend for a fitness application using FastAPI, handling workout creation, management, and daily logging
- Implemented user authentication, workout tracking, and structured exercise and routine management with Supabase as the database layer
- Wrote programmatic tests to validate API endpoints, data integrity, and core business logic

Face Anonymizer | *Python, MediaPipe, OpenCV*

Computer Vision Tool

- Built a CLI tool to automatically detect and blur faces in images, videos, and live webcam feeds
- Used MediaPipe for ML-based face detection and OpenCV for Gaussian blur processing
- Supports three modes: `--mode image`, `--mode video`, and `--mode webcam`

Society Management System | *C#, WinForms, .NET, MSSQL*

Desktop Application

- Developed a desktop platform to streamline university society operations with role-based dashboards
- Implemented event and membership management, task assignment, approval workflows, and announcements
- Integrated Microsoft SQL Server for secure data storage and record management

Cafe Logistics Management System | *C#, WinForms, MSSQL*

Desktop Application

- Built a multi-role desktop app with separate customer and vendor account flows
- Customers can browse menus and place orders; vendors manage items, inventory, and incoming requests

StrawWeather | *Flutter, Dart*

Mobile Application

- Developed a minimal weather app with real-time forecasts, hourly breakdowns, and location-based lookup
- Focused on clean UI design with smooth transitions and a lightweight, bloat-free experience

StrawNotes | *Flutter, Dart*

Mobile Application

- Built an ad-free notes and to-do app with support for categorization, pinning, and quick entry
- Designed for speed and minimalism with persistent local storage and no unnecessary permissions

EDUCATION

FAST NUCES | *BS Software Engineering, Aug 2022 – Aug 2026*

Islamabad, Pakistan

CERTIFICATIONS

- AWS Academy Cloud Foundations
